

HEARING PROTECTION

The final selection of hearing protection should always be made primary towards the level of noise in working area, secondly in regards to the desired comfort. Standard requirements ask that the ambient sound level be under 90 decibel, your hearing protection should attenuate the noise and allow you to get emergency message.

Selection is:

- Disposable earplug, *(hygienic & practical)*.
- Washable earplug, *(economical)*.
- Earmuffs, *(for those who are not comfortable with earplugs)*.
- Headsets (cups) with integrated radio, *(special areas)*.
